Dr. Michael C. Frank   March 29, 2022
Stanford University
Language and Cognition Lab

Dear Dr. Frank,

I am excited to apply to your research coordinator position.

I have research experience working with young adults in academia. I also have experience working with patients from infants to the elderly in a clinical setting when I served as a medical assistant.

My coding experience includes performing statistical analysis and data visualizations with R and Python as well as interactive web animations with HTML, CSS, and JavaScript. I also hope to gain more exposure to MATLAB. I'm comfortable working within Windows, iOS, and Linux environments as well as with their respective office suites including Google Workspace.

I stay organized by borrowing productivity methodologies from various fields. My favorites being GTD and Agile. I incorporate Kanban boards and Gantt charts into my projects as necessary.

My research interests involve language learners' phonetic perception as well as the neural basis underlying phonological and semantic mapping.

I would like to make use of my background in linguistics and programming to contribute to your work concerning language and cognition.

Thank you in advance for considering my inquiry and I look forward to hearing from you.

Sincerely,

Ruben A. Sanchez
